

New!

A74761DAC

Heavy-duty center support

TH350 - 700R4 - 4L60E - 4L65E

Intended for use as a case-saver, our A74761D is a new twist on a resurrected idea.

TH350 cases are no longer plentiful nor as cheap as they once were. 4L60E cases have many variations throughout the years. Either application requires replacement when the case lugs are worn. You can now save your case and improve on the original design!

A74761D fits like OE! After installing your roller clutch and inner race, align outer lugs and set into place. Install the case snap ring. Next, align outer lugs and set the retainer plate in. Install and tighten six allen-head screws to 100-110 inch-pounds.

A new idea, our A74761D utilizes the wide 87-up roller clutch assembly providing more holding power than the early narrow TH350.

Used as a case saver or an upgrade, you've been introduced to the strongest-known center support ever available for these applications!

Answering challenges with profitable solutions.
