

# The Seal Buddy

#T-0069SAC

**GM - Ford - Chrysler**

**Transmission Torque Converter & Axle Seal Driving Set**

**Plastic seal drivers are pricey and don't last.**

We've developed this 10-piece set with tougher driving heads milled from aluminum. Each is perfectly sized featuring a groove with an o-ring, retaining it firmly in the driver.

**The Seal Buddy** includes two driver handles carved from steel. Intentionally hollowed, two lengths allows for seal replacement on assembled transmissions for a quick repair. The shorter for axle seals in-car, the longer for torque converter seals.

Expandable - more applications will become available with market demand. You'll be able to purchase new driver heads on an as-needed basis! **The Seal Buddy** replaces \$100's worth of inferior plastic drivers. As a final touch, we've included a durable case with placement for each piece; promising organization and nick-free storage when not in use.

*The 4T40E uses one of the most challenging axle seal designs.*

*We make it easy! With one application-specific head, the inner sleeve and outer axle seal are driven at the same time to ensure a proper and leak-free conclusion.*

Answering challenges with profitable solutions.

**ADAPT-A-CASE**

[www.Adapt-A-Case.com](http://www.Adapt-A-Case.com)

*The Seal Buddy includes (8) milled aluminum driver heads with (2) different-length driver handles carved from steel. The shorter is intended for in-car axle seal replacement, the longer allows converter seal service on assembled transmissions.*
