

T-1302AC

**Heavy Duty Overdrive Spring Compressor
88-up A500 and '91-up A518/A618**

T-1302AC is laser-cut from 1/4" steel. The (3) vertical bars are welded in place using much stronger mortise-and-tenon joints; finished cleanly by machining them smooth. As a final touch we've anodized it for corrosion protection (and good looks). We've built it plenty tough enough to withstand a lifetime of regular usage: **Over 15x stronger** than it needs to be. In testing, it didn't fail until over 8 tons of pressure had been exerted on it!

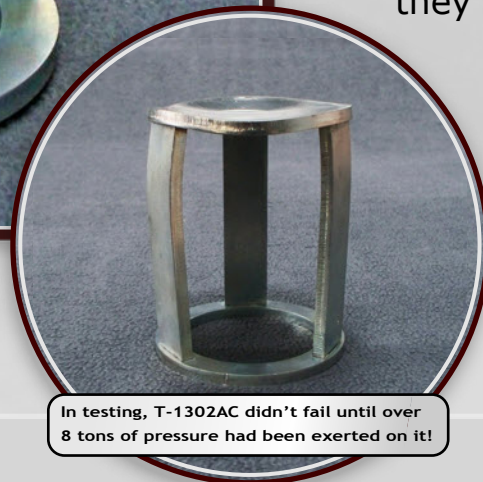

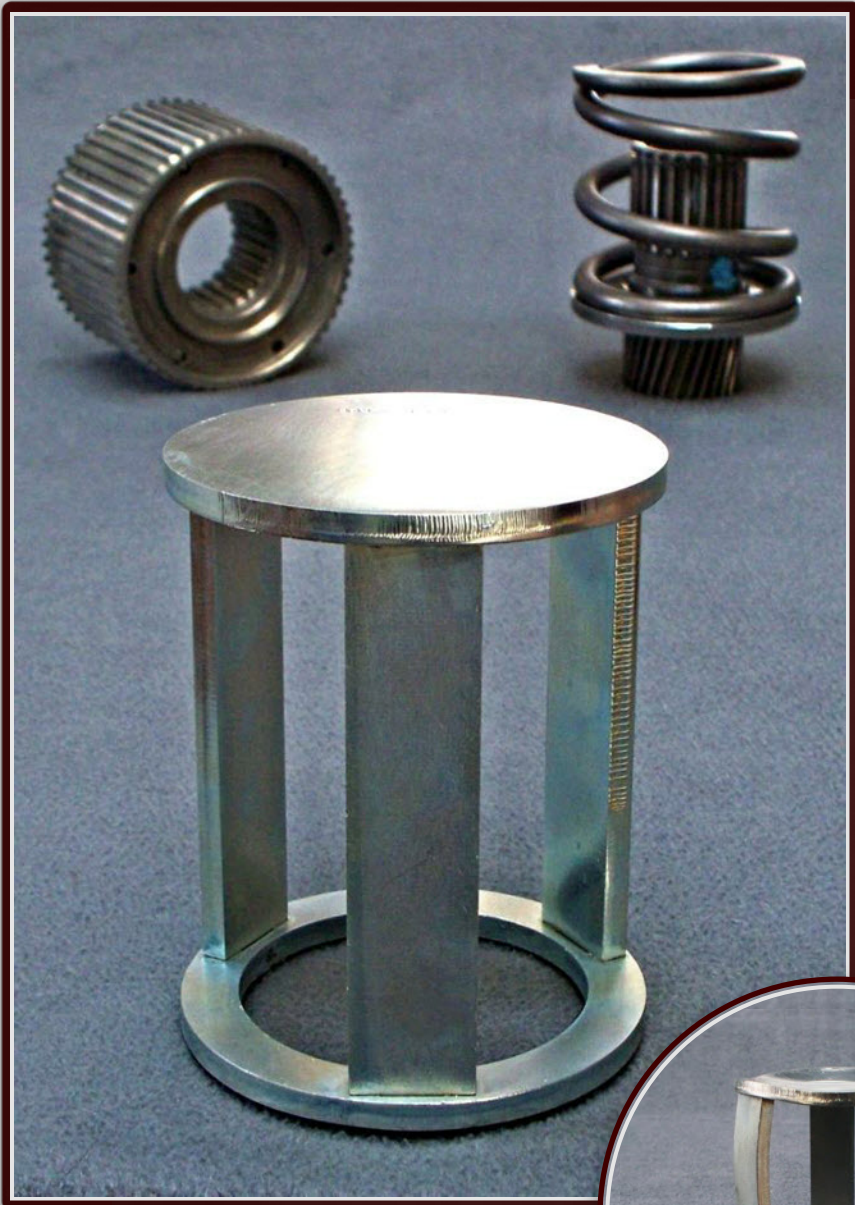

American made! Our high-volume materials purchasing and manufacturing power combine to keep the cost low. Tool distributors can now sell these premium tools at or near the price they've paid for previous market offerings.

Answering challenges with profitable solutions.
